www.melka.com.pl

The MELKA timing station is an innovative solution that streamlines the collection of finished windows, sashes, and frames from the production line. Thanks to its raised rollers, it facilitates safe and ergonomic loading, minimizing the risk of damage and improving work organization. Integration with transport trolleys and an optional automatic feed system increase the efficiency and comfort of warehouse operations.

Technical data:

- Total length: 3782 mm
- Overall width: 1310 mm

The purpose of the station is to facilitate the receipt of finished windows, sashes and frames from the production line.

After parking the buffer trolley and pressing a button, the station raises the rollers to facilitate loading.

Before ordering, it is necessary to specify the height of the roller feeders with which the station will work.

The station works with OF 2344.00F1 window transport trolleys

The trolley is moved to the station manually.

Optionally, the station can be equipped with an automatic trolley movement system by one compartment, which improves warehouse operation and speeds up access to subsequent sections.
